SURGERY

SEDATED

75 LBS

Treated by: DR J CHAU

Dog Neuter: Scrotal Technique

implant chip AVID 609 773 293

A physical exam was performed this A.M. Heart and lungs auscultate normal. MM are pink and CRT<2seconds.

No apparent ocular or nasal discharge observed.

Pre-anesthesia admin of Butorphanol 10mg/ml IM, Carprofen SQ and post-op Buprenorphine ER SQ *.

Normal induction with Telazol IV. Intubated and general anesthesia maintained with isoflurane 2% and oxygen 2L.

Surgical site clipped and aseptically prepped. Thermal support throughout surgery and recovery. Pulse oximetry and apnea monitor normal during surgery.

Sx. – Routine Scrotal castration, Monocryl suture used throughout surgery (2-0 for dogs under 40#, 0 for dogs over 40#), Miller's knot ligature on spermatic cord, cruciate pattern on SQ and intradermal pattern on skin. Linear tattoo made adjacent to incision.

Uneventful recovery and extubation.

* Buprenorphine ER is an extended-release pain medication that provides 72 hours of pain relief through one injection, given prior to surgery. This medication may cause your pet to be drowsy or groggy for the next 3 days and there may be some pain at the injection site. These signs should resolve over the next 3 days but if signs continue after 5 days, please contact OCAC or see your veterinarian for follow up.
